

The Vampir performance analysis tool is available in three editions to meet the needs of different business sizes and application development goals. The editions provide different features sets to support application performance optimization in workstation-type scenarios as well as in extreme scale scenarios.

### Vampir Editions

**Vampir Professional** includes the parallel VampirServer analysis engine that allows highly scalable and efficient analysis of very large performance data of tens of gigabytes corresponding to thousands of application processes. This edition targets large institutions and:

- includes all available displays
- has no process/thread limitation
- is available as site license for multiple computers and various platforms

**Vampir Standard** can analyze mid-sized performance data and includes all analysis features. This edition:

- includes all available displays
- is limited to 256 processes/threads
- is available as personal and site license

**Vampir Light** can analyze small-sized performance data and is suitable for developers in small institutions. This edition:

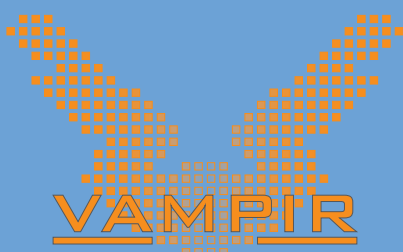

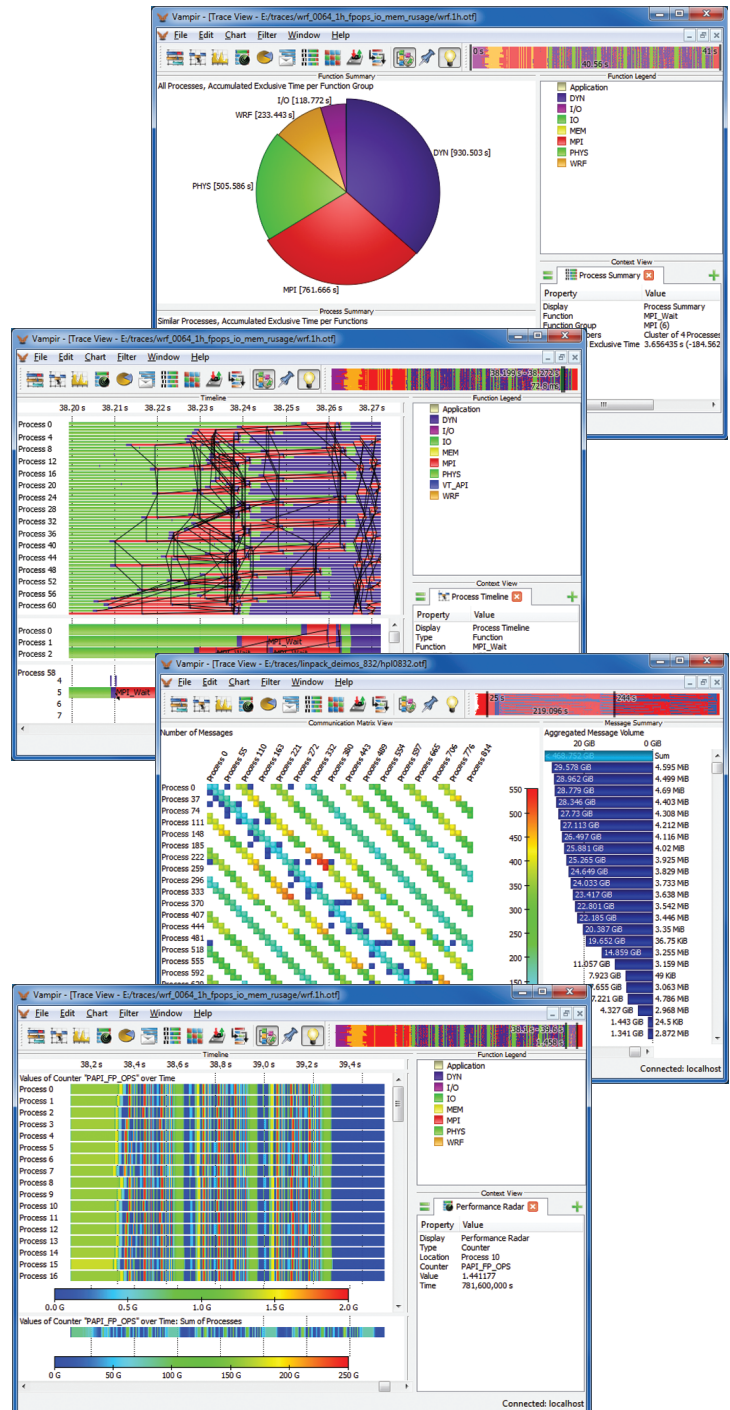

- has limited functionality, e.g., no Performance Radar display
- is limited to 32 processes/threads
- is available as personal license only

### Licensing and Support

License types:

- site license (whole institution, any platform)
- personal license (one named person, one platform)

Vampir supports Windows, Mac OS X, and UNIX platforms. All editions include one year support of the development team. This includes professional help with installation and setup of Vampir as well as maintenance and software updates. Extended support contracts are available upon request.
